1. What term is used to describe the period of time when a backup can be performed without negatively impacting the users?

1 / 1 point

- ☐ Backup Interval
- ☒ Backup Window
- ☐ Archive Interval
- ☐ Archive Window

✓ **Correct**

Correct! The backup window runs from the time the users stop using the computer that needs to be backed up to the next time that they start using it again. Typically, this runs from when the users go home at night until they come back in the next morning.

2. Which command allows you to recover files from backups made by the dump command?

1 / 1 point

- ☐ retrieve
- ☒ restore
- ☐ dedump
- ☐ recover

✓ **Correct**

Correct! The restore command allows you to restore files from backups made by the dump command. Typically, you restore them to the original location but it's not required.

3. You have created an archive of a directory using the **tar** command. However, space is a concern on the media where the archive is stored. You want the archive to take up less room on the backup media. You are not concerned about any impact to the speed or resources that will be needed to use the backup. What command should you use to reduce the size of the tar file?

1 / 1 point

- ☐ dump
- ☐ unzip
- ☒ gzip
- ☐ comptar

✓ **Correct**

Correct! The gzip command can be used to compress an existing archive. When used on a tar file, the resultant file has an extension of .tar.gz.
