

✔ Congratulations! You passed!

Grade received **100%** To pass 100% or higher

[Go to next item](#)

1. You are logged into Ubuntu. You want to display your UID and GID. What command should you use?

1 / 1 point

- ☒ id
- ☐ usermod
- ☐ finger
- ☐ passwd

✔ Correct

Correct! The id command will display the UID and GID of the account you are logged into.

2. You want to create a new user account with a corresponding user private group. You do not want the system to create a home folder for the user. Which command should you use?

1 / 1 point

- ☒ useradd
- ☐ usercreate
- ☐ adduser
- ☐ createuser

✔ Correct

Correct! The useradd command only creates the user and the user private group. It does not create the home directory.

3. You need to remove a user named chris. You want to make sure that the user private group and the user's home directory are removed at the same time. What command should you use?

1 / 1 point

- ☒ sudo userdel -r chris
- ☐ sudo usermod -r chris
- ☐ sudo userdel chris
- ☐ sudo usermod -d chris

✔ Correct

Correct! When you use the -r option with userdel, it removes the user and the user private group. It also deletes the user's home directory and all of the contents.

4. You have a user with a username of pjones. The user's full name is Paula Jones. The user marries and changes her last name to Doe. You need to change the username for the pjones account to pdoe. What command should you use?

1 / 1 point

- ☐ usermod -L
- ☐ usermod -U
- ☐ usermod -e
- ☒ usermod -l

✔ Correct

Correct! The usermod -l command is used to modify the login name, or username, of the user.
